STRUCTURAL FIREFIGHTING

FORTEX

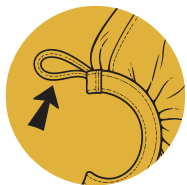

WITH NOMEX® NANO FLEX

Built for structural firefighting, the FORTEX hood combines **advanced particulate-blocking** technology with purpose-driven design.

Constructed with Nomex® Nano Flex fabric, the FORTEX hood provides a breathable, flexible barrier designed to help reduce exposure to harmful particulates without sacrificing comfort or mobility.

Thoughtful design enhancements improve fit, function, and ease of use to bring practical performance to the details that matter on the fireground.

Purpose-built, rugged, and ready for the demands of the fireground. FORTEX is protection, re-engineered.

DOFF ASSIST TAB™

Strategically positioned at the top of the face opening, the integrated elastic tab provides an easy-to-grasp point to assist with hood positioning and doffing.

DIRECT-GRIP™ FACE OPENING

Exposed elastic makes direct contact with the SCBA facepiece, creating a firm, secure grip while eliminating the traditional fabric-covered elastic construction.
