

Flotation Collar

The Flotation Collar floats above water surface, thereby enabling easy and efficient reach to the casualty.

USES AND APPLICATIONS

This is a buoyancy aid designed to capture and tighten around a casualty in water. It can also be used to lift a human or animal up to a height, while providing a cushioned hold.

HOW TO USE

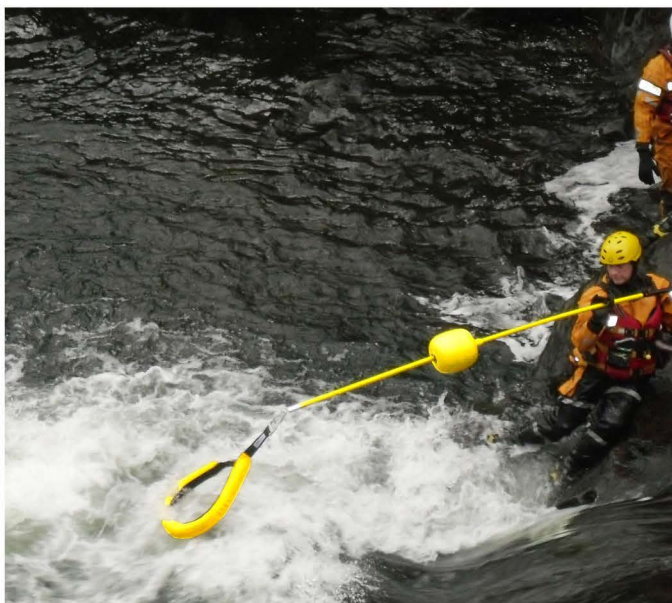

The Flotation Collar comes with a sleeved fitting. This is designed to slide over the pole top fitting, which secures it in place using a double sprung button mechanism. A second line can be attached to the main collar metal eye to aid heavy lifting. This device floats to enable ease of reach to the casualty.

MAINTENANCE & PRECAUTIONS

The sleeve fitting should be tested regularly on the pole top fitting, as damage will prevent the attachment from fitting securely. The Velcro lasso system should be checked and maintained. Clean regularly to maintain high standards.

SPECIFICATIONS

- Material: Stainless Steel, Webbing & Foam Insert
- Exterior: iNylon Coating
- Color: High-Vis Yellow
- Weight: 1.5 lbs.
- Opening: 18 in.
- Dimensions(inches): 7.4 (l) x 1.6 (w) x 3.6 (h)
