

VentMaster[™]

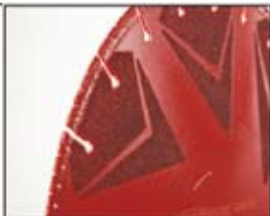

CUTOFF SAWS

VentMaster Diamond Cutoff Saw Blades

Tempest Technology offers a complete line of durable diamond cutoff saw blades for emergency and rescue applications. All Ventmaster blades feature industrial grade diamonds that are attached using either a vacuum brazing process or laser welding process.

All-Cut Rescue Diamond Blade

Diamonds are attached using a vacuum brazing process. Blade core features silicone carbide electroplating to reduce binding. This is our best "all purpose" blade suitable for cutting steel, rebar, ductile iron, cooper, wood fiber board, stucco, concrete, masonry, stone, brick, PVC piping and High Density Polyethylene (HDPE).

Ventmaster Diamond Blade

Diamonds are attached using a vacuum brazing process. Vacuum brazing is stronger under conditions of extreme heat. Blade is suitable for rescue & demolition work including iron pipe and security bars, steel doors and locks, vehicle bodies. This blade is not suitable for cutting wood products.

Concrete Diamond Blade

Diamonds are attached using a laser welding process. Blade is designed for general concrete cutting, concrete pipe, and concrete walls.

Ductile Iron Diamond Blade

Diamonds are attached using a vacuum brazing process. Blade Core features silicone carbide electroplating to reduce binding. Blade is designed to cut Ductile Iron, Ccast Iron, concrete pipe and reinforced concrete. Cutting reinforced concrete will cause excessive blade wear.
